

Spokane ICCS

The estimated 961,000 acres of palustrine and estuarine wetlands in the state of Washington are distributed over the land cover/uses displayed in this chart. NRI data is not collected for any year that land is in Federal ownership.

* **Land cover** categories such as cropland include a variety of land covers (grass, trees, shrubs, berries, bare soil {fallow}, small grains, etc.).

* **Land use** categories such as cropland is classified primarily by its use and secondly by its cover. In contrast, forestland is a land category that includes multiple concurrent uses. It is classified first by its cover and second by its use.
